

# SINGAPORE FOOD STATISTICS 2021

## Safeguarding Singapore's Food Security: Our Multi-Pronged Approach

Singapore's food supply sources were further diversified between 2019 and 2021.

With more than 90% of food imported, diversification is a key strategy to ensure Singapore's food security. SFA continuously works to diversify Singapore's import sources so that Singaporeans can enjoy a stable supply of safe food.

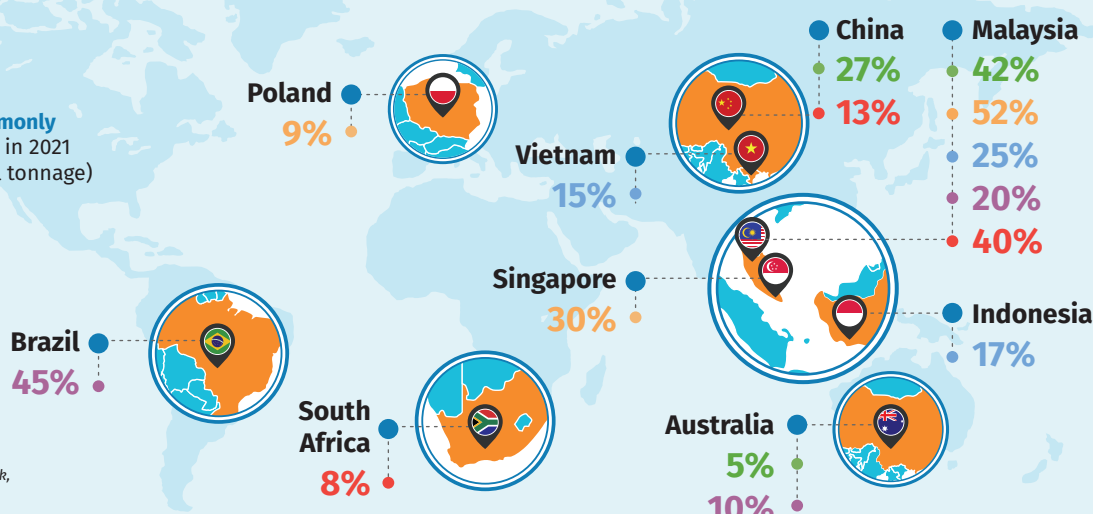

In 2021, the number of imported food supply sources by countries and regions **increased**.

Major sources of **commonly consumed food** items in 2021 (in terms of % of total tonnage)

- Vegetables
- Hen shell eggs
- Seafood
- Meat
- Fruits

*Note: Meat refers to Chicken, Pork, Beef and Mutton.*

## Strengthening Singapore's Food Resiliency: Local Production

While import source diversification has served us well, local production provides a buffer supply in the event our import sources are disrupted.

From 2019 to 2021, the number of licensed local food farms **increased**.

From 2019 to 2021, local production of hen shell eggs **steadily increased**. Around **one in three eggs** consumed in 2021 was locally produced.

**Local Production and as a Percentage of Total Consumption by Year (2019 to 2021)**

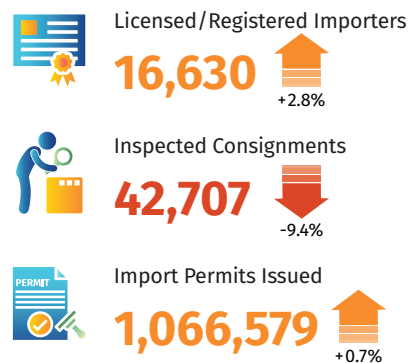

## A Risk-Based Approach Towards Food Safety

SFA's integrated food safety system from farm to fork helps ensure that food is safe for consumption. Targeted and data-driven operations help SFA to maximise resources to achieve its mission, despite the increasingly diverse imported food sources and an increase in the number of food establishments.
